Description
A Leading Pedestrian Interval (LPI) allows pedestrian to begin crossing several seconds before the vehicle traffic on the parallel street is given the green light.

Advantages
- Elimination of conflicts with vehicles for pedestrians at the beginning of “walk” signal.
- Increased pedestrian safety and comfort and perceived safety level by increased pedestrian visibility at the crosswalk.
- LPI treatment is relatively cheaper and easy to implement.

Proposed Locations
- Fourth Street/Springfield Avenue
- Sixth Street/Springfield Avenue
- Wright Street/Springfield Avenue
- Goodwin Avenue/Springfield Avenue
- First Street/Green Street
- Fourth Street/Green Street
- Fourth Street/Daniel Street
- Fourth Street/Armory Avenue
- Sixth Street/Armory Avenue
- Sixth Street/Gregory Drive
- Fourth Street/Peabody Drive
- First Street/Kirby Avenue
