Description
A pedestrian scramble phase gives a walk signal to pedestrians in all directions at the same time at a signalized intersection while drivers are stopped in all directions.

Advantages
- Pedestrians can cross the intersection without any conflicting vehicular movements.
- Allow pedestrians to complete two crossings at once by crossing diagonally.
- For CATS Zones 1 and 2, implementing pedestrian scramble at certain intersections enhances pedestrian & bicycle safety while discouraging vehicular movements by adding travel delay.
- Pedestrian scramble is a cheaper improvement to add at a signalized intersection.
- Some intersections within the University District currently have pedestrian scramble and road users are aware of such treatment.

Proposed Locations
- Goodwin Avenue/Green Street Intersection
- Fourth Street/Armory Avenue Intersection

Preferred Alternative: Pedestrian Scramble
